Christmas giving in Buea

Project completion report

22 December 2022 • Buea, Cameroon

On Thursday, 22 December 2022, our team visited Sima orphanage in Buea for our first Christmas programme for children in orphanage care. We brought practical provisions and seasonal gifts, extending support to the children and the adults caring for them. This was one way of expressing our Christian commitment to share Christ's love through service, using the resources entrusted to us.

Food supplies in the December project photographs.

Who we reached

Our account records 33 children, aged approximately 10 to 15, and 3 adult caregivers. The two groups are reported separately. Sima is the name we remember for the institution. These details come from our project recollection rather than a verified attendance register; no names or identifying details of children are disclosed.

What we brought

The purchases included rice, cooking oil and other foodstuffs, together with Christmas clothing, shoes and slippers, and toys. Food provisions and seasonal gifts served different purposes within the same outreach. Caregivers also received support through the visit.

Sharing practical care

Christmas giving in Buea • 22 December 2022

How the support was delivered

We arranged purchases, including travel to market, and visited the orphanage to provide the goods. Transport and withdrawal charges were part of the project costs, separate from the goods themselves. The goods and operating costs are presented separately in the financial account on the next page.

What this visit accomplished

The reported result was delivery of the listed categories of goods to the orphanage community, reaching the children and caregivers described above. The documented scope of this report is the support provided during the visit. Longer-term outcomes are not established in the available account.

Food being handled during the visit.

Our approach to faith and care

Our Christian identity explains the heart behind this service. Assistance was available regardless of participation in prayer or worship. Our usual practice after projects is to reflect together on delivery, timing and improvements for future work.

Reporting basis: Prepared some time after the project was carried out, using our recollection and available working files. Quantities and individual allocations are not established. The financial section distinguishes our confirmed aggregate account from reconstructed category allocations that are not independently verified.

Financial account

Christmas giving 2022 • Amounts in FCFA (XAF)

Funding and costs

Our reported account for this project is 360,000 FCFA in total, including 330,000 for goods, 20,000 for transport to market for purchases and 10,000 for withdrawal. These aggregate figures were confirmed in our project account; they have not been independently checked against transfer records or receipts. The detailed category allocations on page 4 are reconstructed, not verified historical prices.

Account line	FCFA	Basis
Total project funds	360,000	Reported project account
Goods	330,000	Reported aggregate goods amount
Transport for purchases	20,000	Reported operating cost
Withdrawal	10,000	Reported operating cost
Total accounted for	360,000	330,000 + 20,000 + 10,000
Difference within this account	0	360,000 less 360,000

What the zero difference means

The reported goods and operating costs account for the full project total. This project account identifies no balance remaining in our accounts from this project. The zero difference is an arithmetic reconciliation of the figures provided, not a bank or mobile-money reconciliation, and it is not today's account balance.

What the goods total covers

The 330,000 FCFA goods total covers rice, cooking oil, other foodstuffs, Christmas clothing, shoes and slippers, and toys. Page 4 breaks down this total by category so the allocations can be reviewed in detail. Those category amounts are reconstructed; their sum matches the confirmed aggregate by construction and does not verify the individual prices paid.

Records and limits

The available sources contain no inspected receipts, itemized purchase ledger or verified distribution register. The account therefore establishes neither unit prices nor equal packages; the reach figures should not be used as a standard cost per person.

Withdrawal means the charge for withdrawing project funds as cash. This account is not an audited statement. The detailed schedule forms part of this report. It distinguishes reconstructed allocations from the confirmed aggregate totals; neither is represented as independently audited expenditure.

Detailed goods allocation

Reconstructed category amounts • Not independently verified

The goods categories below were recalled for the project. Their individual amounts are reconstructed allocations preserved from our working schedule, not independently verified historical purchase amounts. Transport and withdrawal retain the reported amounts, rather than being new allocations.

Category	FCFA	Status
Rice	90,000	Reconstructed allocation
Cooking oil	50,000	Reconstructed; oil types not split
Other foodstuffs	35,000	Reconstructed; excludes rice and oil
Christmas clothing	65,000	Reconstructed allocation
Shoes and slippers	50,000	Reconstructed; footwear types not split
Christmas toys	40,000	Reconstructed allocation
Goods subtotal	330,000	Confirmed aggregate; split reconstructed
Transport for purchases	20,000	Reported operating cost
Withdrawal	10,000	Reported operating cost
Combined schedule total	360,000	Matches reported project total

Arithmetic check

90,000 + 50,000 + 35,000 + 65,000 + 50,000 + 40,000 = 330,000 FCFA. Adding transport of 20,000 and withdrawal of 10,000 gives 360,000 FCFA. No operating amount has been counted twice.

Reading the category schedule

The category allocations describe the reconstructed distribution across food, clothing, footwear and toys. They remain distinct from independently verified expenditure and will be updated if further records become available.

No quantities, unit prices, identical packages or per-person costs are implied. Cooking oil remains one category; the exact mix of red oil and groundnut oil for this visit is not established.
