

School visit in Buea

Project account and financial account | 11 May 2022 | ADA/2022/004

Instructor during the May 2022 school visit.

The heart of the visit

We wanted our time and resources to offer students more than a brief delivery of supplies. A school visit creates space to encourage young people while meeting practical needs. Our Christian identity shapes that commitment to care, and receiving support does not depend on joining prayer or worship.

The activity recorded

The earlier May project account describes a school visit with mentorship and encouragement, food and refreshments, and educational materials or handouts.

Students, school and period

Our visit took place on Wednesday, 11 May 2022, in Buea, at the school remembered as Lycée de Buea. The available account does not establish an attendance count, so we do not report a number of students reached.

What the support covered

The earlier account lists food and refreshments, educational materials and the operating costs needed to organise the visit. Transport, communication and withdrawal-related costs are included in the detailed reconstructed allocation. No exact item quantities, unit prices, identical packages or specific stationery types are inferred from the category totals.

Delivery and outcome

The documented scope is a school visit involving practical support and encouragement. The available account does not establish lasting academic progress, guaranteed attendance, a new formal partnership or a measurable effect on students. This visit followed our separate February school outreach.

Our responsibility to students

We want the account of our visit to respect the students and school community. The financial account describes the support allocated to this visit without attributing an equal package or an equal cost to each student.

Prepared some time after the project was carried out. This account brings together the earlier school-visit documents and subsequent clarifications. The financial pages distinguish the original budget, the approved reconstructed allocation and unresolved cash accounting.

Financial account

May school visit | FCFA (XAF)

What the figures mean

The earlier source terms of reference budgeted 180,000 FCFA. The reconstructed breakdown was accepted by our organization: 165,000 FCFA in cash-cost categories plus 15,000 FCFA in refreshments provided in kind. These fixed figures show the reconstructed allocation; they are not an authenticated transfer or receipt-supported expenditure statement.

Line	FCFA	Basis
Earlier written budget	180,000	Source budget; not cash-transfer evidence
Reconstructed cash-cost subtotal	165,000	Detailed allocation on page 3
Refreshments provided in kind	15,000	Reconstructed value; separate from cash
Combined support value	180,000	165,000 cash allocation + 15,000 in kind
Exact cash received	Not established	No verified transfer reconciliation
Balance remaining in our accounts	Not established	Cannot be calculated from this allocation

Cash and in-kind support are different

The earlier account attributes refreshments to the school; neither attribution nor the 15,000 FCFA value is independently verified. This in-kind support is not cash received or spent. Subtracting 165,000 from 180,000 does not establish a cash balance or savings.

Financial evidence

The detailed allocation explains how the support was divided into categories. Complete receipts and transfer reconciliation are not available in the records reviewed for this account, so the allocation is not presented as independently verified expenditure. The 15,000 FCFA in-kind value is not a cash balance.

Basis of the account

The table on page 3 makes the financial detail visible. Its allocations were constructed to fit the working amount and may be corrected as records are recovered. No beneficiary unit cost is calculated because neither a verified attendance count nor equivalent packages is established.

Detailed financial allocation

Reconstructed category schedule | Not independently verified payments

The fixed category amounts below show the reconstructed schedule used here. They are reconstructed allocations, not verified historical purchase prices. The two food lines are combined because the source does not independently distinguish separate purchases.

Category	FCFA	Basis
Food snacks and drinks	85,000	Combines earlier 60,000 and 25,000 lines
Volunteer transport	30,000	Reconstructed allocation; no headcount implied
Educational materials and handouts	20,000	No item quantities or unit prices established
Communication and coordination	10,000	Reconstructed allocation
Withdrawal or transfer-related costs	5,000	Proposed allowance; exact fee unconfirmed
Additional supplies or incidentals	15,000	Reconstructed allocation
Cash-cost subtotal	165,000	Sum of six cash categories
Refreshments in kind (earlier account)	15,000	Separate non-cash value; not counted above
Combined support value	180,000	Cash allocation plus in-kind value

Arithmetic check

85,000 + 30,000 + 20,000 + 10,000 + 5,000 + 15,000 = 165,000 FCFA. Adding the separate in-kind value of 15,000 gives 180,000 FCFA in combined support. The match is by construction and does not verify payments.

Where the fee allowance came from

The earlier source used a 20,000 FCFA contingency line. The reconstructed allocation divided that amount into 5,000 for withdrawal or transfer-related costs and 15,000 for additional supplies or incidentals. Neither exact historical use is independently confirmed.

The cash received and balance remaining in our accounts still require a cash reconciliation; no cash balance is implied by this schedule.
