5. Variance Analysis

Total project expenditure was 15,000 CFA ($25.00 USD) under budget, representing a 4.2% savings. The following factors contributed to the positive variance:

5.1 Rice Procurement (–4,000 CFA)

Budgeted at 12,000 CFA per 10kg bag based on retail pricing. Purchasing 12 bags from a single vendor at the market yielded a wholesale discount, reducing the effective per-bag cost to approximately 11,667 CFA.

5.2 Cooking Oil Procurement (–3,000 CFA)

Similarly, bulk purchase of 12 × 5L jerry cans from one supplier yielded a modest wholesale discount, reducing total cost from 60,000 to 57,000 CFA.

5.3 Buckets & Seasonings (–2,000 CFA)

Orange buckets were purchased at the budgeted rate, but assorted seasonings to fill them were sourced slightly below estimated cost through market negotiation.

5.4 Communication Savings (–2,000 CFA)

WhatsApp messaging (using existing data bundles) reduced the need for voice call airtime. Coordination was efficiently managed through the team's WhatsApp group.

5.5 Contingency Underspend (–4,000 CFA)

The contingency line of 9,000 CFA was conservatively budgeted. Actual miscellaneous expenses (water for team, minor incidentals) totaled only 5,000 CFA.

5.6 Conclusion

The under-spend reflects effective procurement practices (wholesale purchasing) and efficient communication methods, not a reduction in planned activities. All 12 widows received complete food packages as planned.
